

QAMBER MUHAMMAD HANIF

Gwadar, Balochistan, Pakistan | CNIC: 52101-8935527-1 | +92 323 3209195 | qamberhanif11@gmail.com | LinkedIn | GitHub | Portfolio

Building production infrastructure for Gwadar & Turbat — regions with no local food delivery, limited connectivity, and zero existing tech ecosystem. ~650km from where the apps stop.

EXPERIENCE

Full Stack Engineer

May 2026 – Present

Evu (Unhire)

Remote, New York, USA

- Architected the **Expert Dashboard** from scratch — freelancer contract management, milestone tracking, and earnings view; cut average task-completion navigation from 7 steps to 3 (**60% reduction**).
- Shipped **real-time dispute chat** with WebSocket rooms, Cloudinary file uploads, and persistent MongoDB message history; platform recorded **40% drop in communication-related support tickets** within 30 days of launch.
- Engineered full **Stripe Connect** onboarding-to-payout flow: capability provisioning, webhook idempotency, stale-account recovery, and milestone-based fund releases with Firebase real-time UI sync; **35% fewer payment support requests** post-launch.
- Diagnosed and eliminated cold-start latency on Render free-tier via UptimeRobot keep-warm layer, reducing initial API response from **~15s to under 500ms** and maintaining production SLA across all endpoints.
- Built transactional email infrastructure with **Resend** across 12+ event triggers; **30% improvement** in client response rate, measured against pre-deployment 30-day baseline.

Full Stack Engineer (Intern)

Feb 2026 – May 2026

Evu (Unhire)

Remote, New York, USA

- Delivered production features across payments, real-time chat, and dashboards during a 4-month internship, converting to full-time based on shipped impact.

EDUCATION

University of Turbat

Balochistan, Pakistan

Bachelor of Computer Science, CGPA: 3.32/4.00

Expected Dec 2027

SYSTEMS BUILT

Cherag — AI Study Platform

2024 – Present

React 19, FastAPI, Supabase, 5-Tier AI Cascade | cherag.pages.dev | 800+ registered users

- **Problem:** No reliable AI tutoring for university students in remote Pakistan with inconsistent provider uptime. **Solution:** Built a **5-tier multi-model AI cascade** (Gemini, DeepSeek, Groq Llama 3.3 70B, Hugging Face, OpenRouter) with automatic failover and key rotation — **99%+ AI feature uptime** despite individual provider outages.
- Engineered a **Cognitive Belief Graph Engine** that models per-concept student understanding (*correct, partially correct, misconception, unknown*) with AI relevance gating and belief propagation across a concept dependency graph — diagnostic depth beyond simple test scores.
- Shipped a full cognitive learning suite — RAG chat, Feynman teaching mode, Knowledge Radar, Exam Simulator, Concept Remix, and Mental Models — solo, with **42 passing tests** (15 Vitest + 27 Pytest) on a zero-dollar infrastructure budget.

Karwan — Hyperlocal Food Delivery

2025

Flutter, FastAPI, Supabase, React

- **Problem:** Gwadar and Turbat have zero food delivery coverage — Foodpanda's nearest city is Quetta, ~650km away. **Built:** Customer mobile app, vendor dashboard, and admin panel as three fully separate interfaces on one backend.
- Designed multi-role auth (customers, vendors, admins) with RBAC and session persistence; **restaurant-owned delivery model** at 12% commission — architecture decisions made for the constraints of the market, not defaults.

Offline-First POS System

2024

React, TypeScript, Supabase, IndexedDB

- **Problem:** Retail environments in low-connectivity regions need a fully operational system when the internet drops. **Solution:** Local-first IndexedDB layer with background Supabase sync; system runs at full capacity offline.
- Rewrote search and indexing logic across a **10,000-item catalog**, achieving **90% reduction in local query time** vs. the original implementation.

CONSTRAINTS SOLVED IN PRODUCTION

- Implemented **Stripe Connect stale-account recovery** and webhook idempotency handling for edge cases the official docs don't cover — discovered and fixed in production on a live marketplace.
- Built **offline-first POS** with IndexedDB sync for unreliable-connectivity environments; 90% query speedup on a 10K-item catalog with zero data loss on reconnect.
- Maintained **99%+ AI feature uptime** on a zero-budget backend by routing across five LLM providers with automatic fallback — no single point of failure, no DevOps team.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), Python, SQL, Dart

Frontend: React, Next.js, Tailwind CSS, Flutter

Backend: Node.js, FastAPI, REST APIs, WebSockets, Resend/SMTP

Databases & Infra: MongoDB, PostgreSQL (Supabase), Firebase, IndexedDB, Docker, Linux, Cloudinary, Render, Railway, Cloudflare Pages

Payments: Stripe Connect (onboarding, webhooks, idempotency, milestone-based fund flows)

Concepts: Distributed Systems, Event-driven Architecture, Real-time Architecture, Offline-First Design
